Project Title: Smart Healthcare Record System (HIPAA-style Prototype)

Aim: This project focuses on developing a secure, efficient, and HIPAA-compliant electronic health record (EHR) prototype. The system is designed to ensure patient data confidentiality, streamline billing and insurance processes, and integrate compliance-ready audit tracking for accountability.

Key Responsibilities:

1. Develop centralized patient profiles containing diagnoses and prescriptions.
2. Implement SQL stored procedures to manage billing, insurance claims, and validation.
3. Build a C++ module to encrypt and decrypt sensitive medical data prior to storage.
4. Design audit logging mechanisms to monitor record access and maintain transparency.
5. Apply database triggers to detect suspicious activities and prevent misuse.
6. Create database views to generate anonymized datasets for secure research purposes.

Expected Outcomes:

1. A secure prototype EHR system protecting sensitive health information.
2. Automated billing and insurance workflows that enhance efficiency.
3. Strengthened compliance with healthcare data privacy regulations.
4. Transparent audit logs supporting trust and accountability.
5. Availability of anonymized healthcare data for responsible medical research.
